# Welcome to Infinity **X2** – PROGRAM

The Next-Generation Decentralized Earning Ecosystem

# Overview

Infinity is a next-generation decentralized earning ecosystem designed to provide users with a transparent, automated, and scalable income model powered entirely by blockchain technology. The platform operates on the BNB Smart Chain and utilizes Binance-Pegged Solana (BEP-20 SOL) as its primary participation and transaction token. By removing centralized intermediaries, Infinity ensures that all earnings, placements, and distributions occur directly between participants through immutable smart contracts.

The ecosystem is built around a structured X2 matrix model combined with unlimited recycling, allowing users to earn repeatedly from a single level activation. Participants register with a unique username, activate one or more levels, and earn directly through wallet-to-wallet payouts. Infinity is designed to be accessible to beginners while offering deep earning potential for experienced network builders, making it a sustainable and long-term decentralized earning solution.

# Mission

Infinity's mission is to democratize wealth creation by providing a decentralized, permissionless, and globally accessible earning platform. The project aims to eliminate traditional barriers such as centralized fund custody, delayed withdrawals, hidden rules, and opaque reward systems that often undermine trust in digital earning platforms.

By leveraging blockchain automation, smart contract execution, and a mathematically structured earning model, Infinity ensures that rewards are distributed fairly and transparently based on predefined logic. The long-term objective is to build a trusted global ecosystem where participants can achieve financial independence through sustainable growth, automation, and community-driven expansion.

# What is Blockchain?

Blockchain is a distributed ledger technology that enables secure, transparent, and tamper-proof data recording across a decentralized network of computers. Unlike traditional centralized systems, blockchain does not rely on a single authority, making it resistant to manipulation, censorship, and single points of failure.

Each transaction recorded on the blockchain is cryptographically secured and permanently stored, allowing public verification and auditability. Smart contracts—self-executing programs stored on the blockchain—enable automated actions such as payouts and referrals without human involvement.

In Infinity, blockchain technology ensures that all matrix placements, income distributions, and recycle operations are executed automatically and verifiably on-chain.

# Why Binance-Pegged Solana (BEP-20 SOL)?

**1** The BNB Smart Chain offers ultra-low gas fees and fast transaction confirmation times, making it ideal for high-frequency automated systems like Infinity. BEP-20 compatibility ensures seamless integration with popular wallets such as MetaMask, Trust Wallet, and SafePal.

By choosing Binance-Pegged Solana, Infinity delivers speed, affordability, liquidity, and user accessibility within a secure decentralized framework.

**2** Infinity is built using Binance-Pegged Solana (BEP-20 SOL), which represents Solana's value while operating on the BNB Smart Chain.

This approach combines Solana's high-performance value proposition with the reliability, scalability, and low-cost infrastructure of BNB Chain.

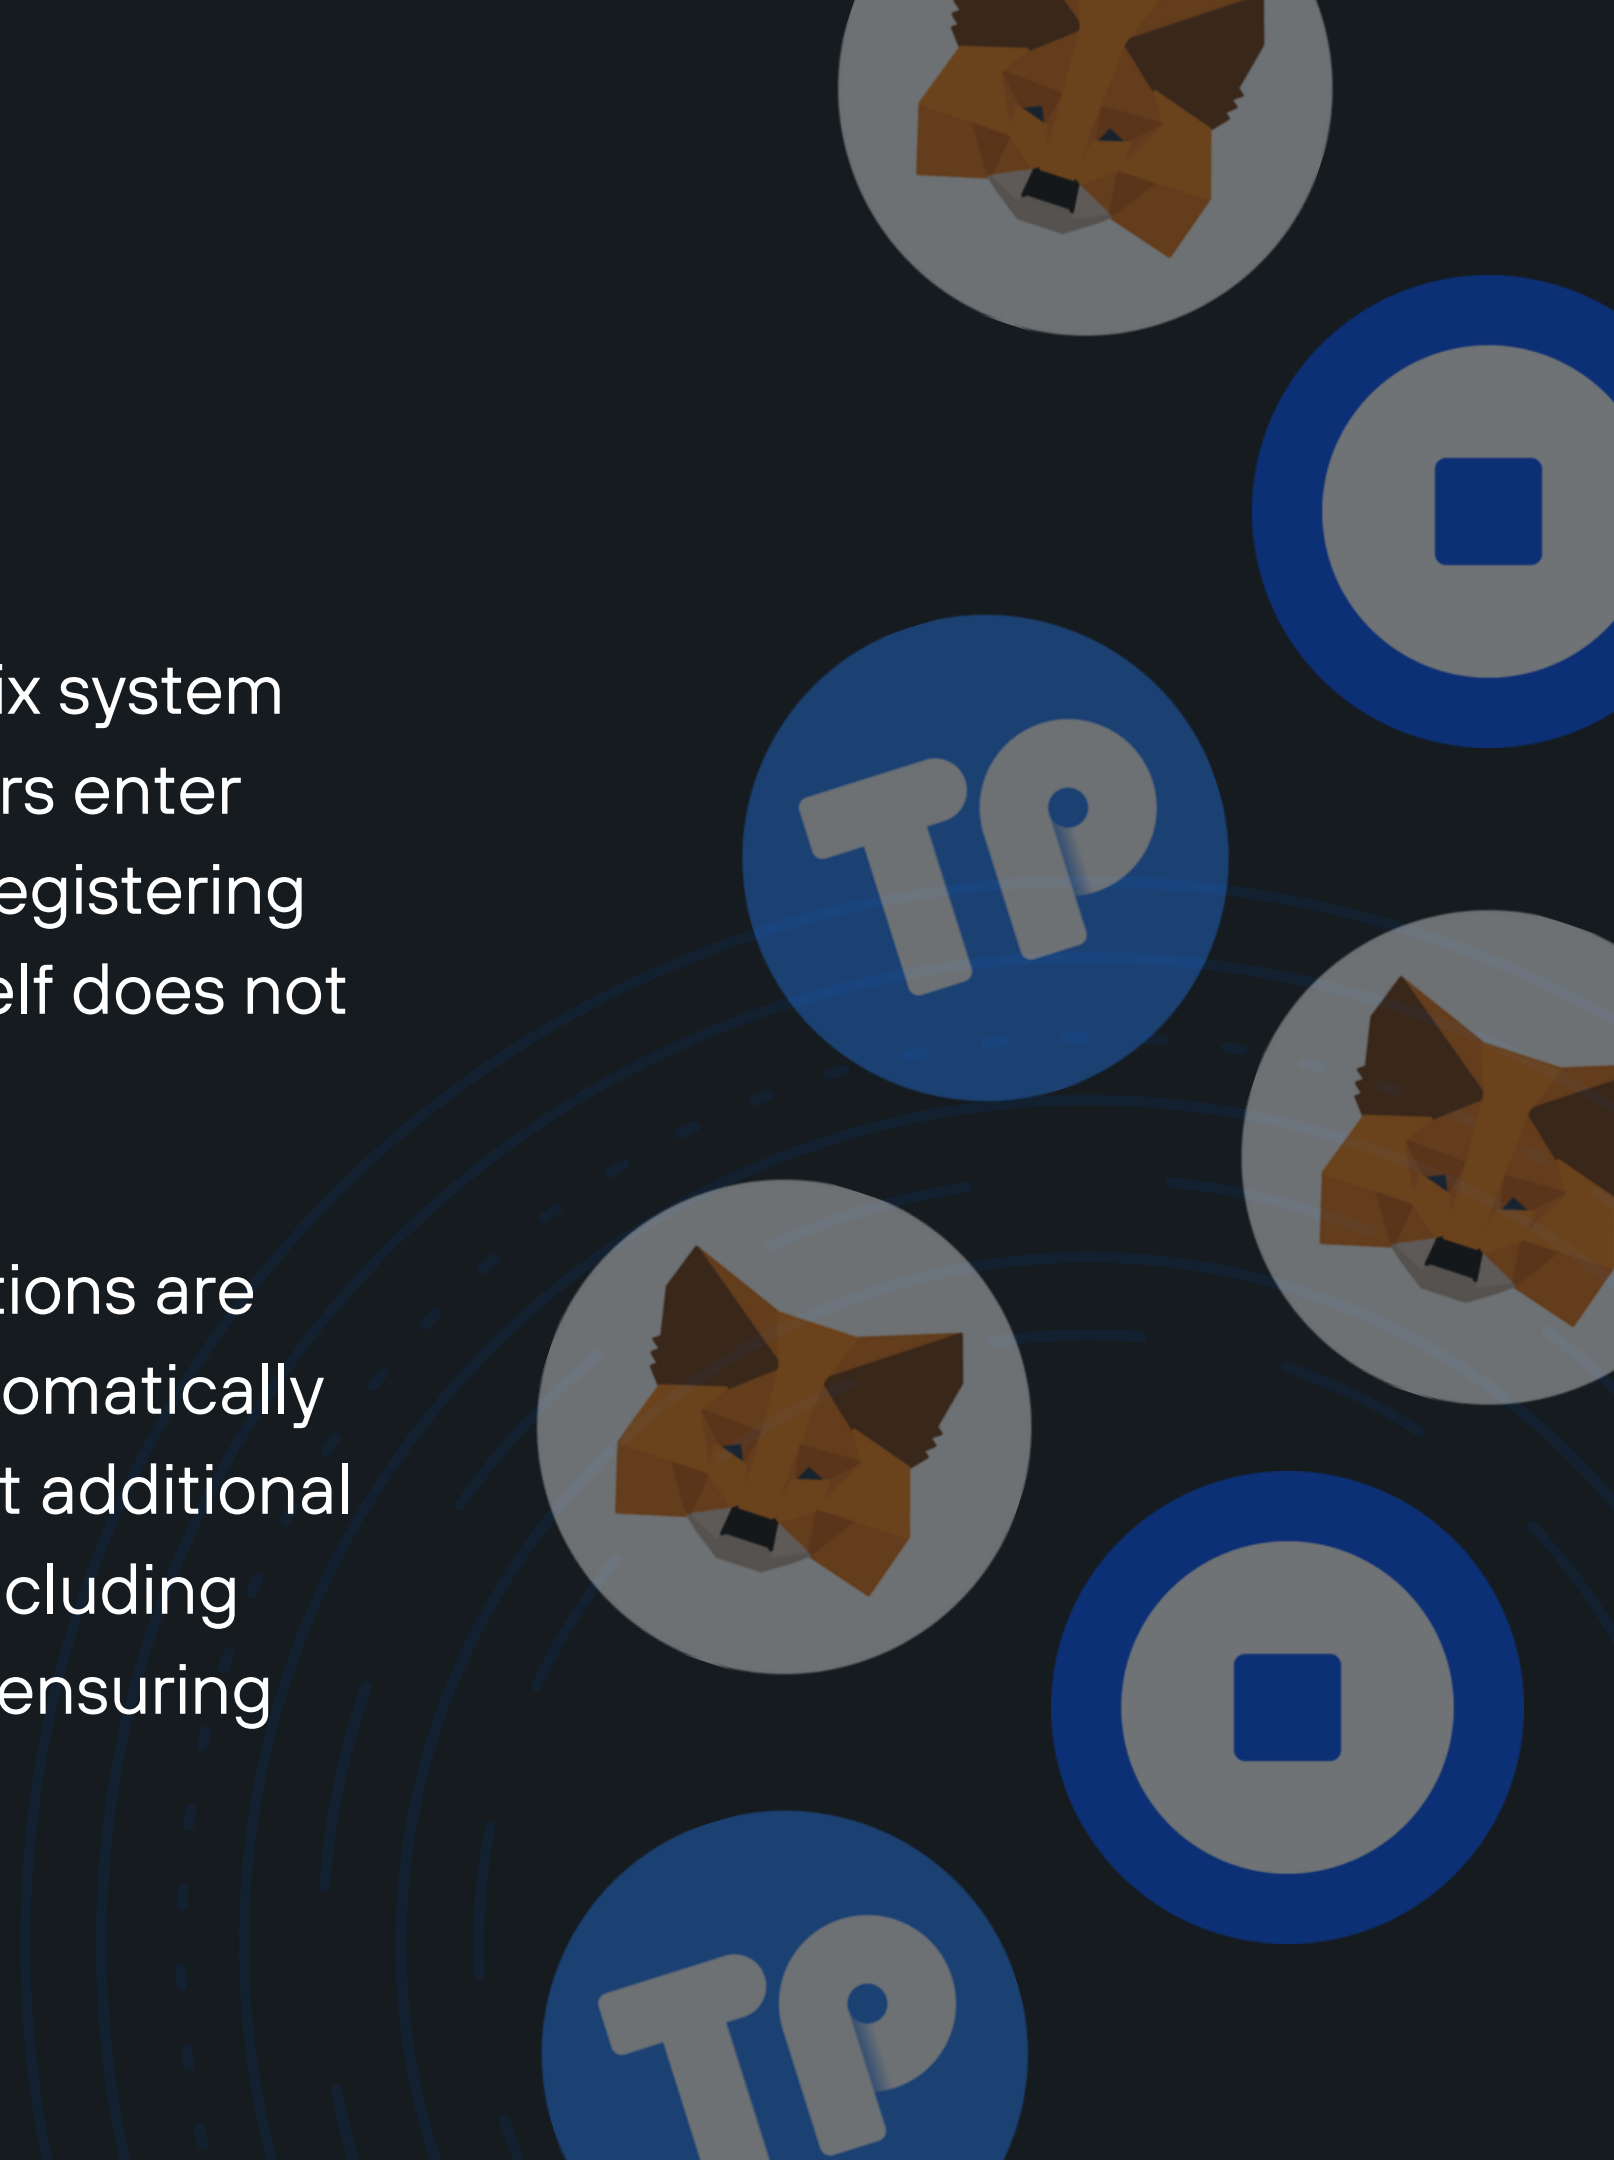

# Project Architecture and Ecosystem Mechanics

Infinity operates through a smart contract-powered X2 matrix system designed to generate continuous earning opportunities. Users enter the ecosystem by connecting a BEP-20 compatible wallet, registering a unique username, and selecting a referrer. Registration itself does not require payment; earnings begin once a level is activated.

Each matrix cycle consists of two positions. When both positions are filled through direct referrals, the cycle is completed and automatically closed. A new cycle is then opened at the same level without additional cost, allowing participants to continue earning. All actions, including placements, payouts, and recycling, are executed on-chain, ensuring transparency and automation.

# Packages

Infinity offers twelve progressive levels designed to support exponential growth and scalable earning potential. Each level doubles in cost and reward capacity, starting from Level 1 at 1 SOL and extending up to Level 12 at 2048 SOL. This mathematical progression ensures balance between entry affordability and high-level earning opportunities.

**NOTE-** Given packages are in SOLANA

# Rank Requirements

**10 SOL - SILVER**

**800 SOL - EMERALD**

**100 SOL - GOLD**

**1000 SOL - DIAMOND**

**200 SOL - PLATINUM**

**2000 SOL - DOUBLE  
DIAMOND**

**400 SOL - RUBY**

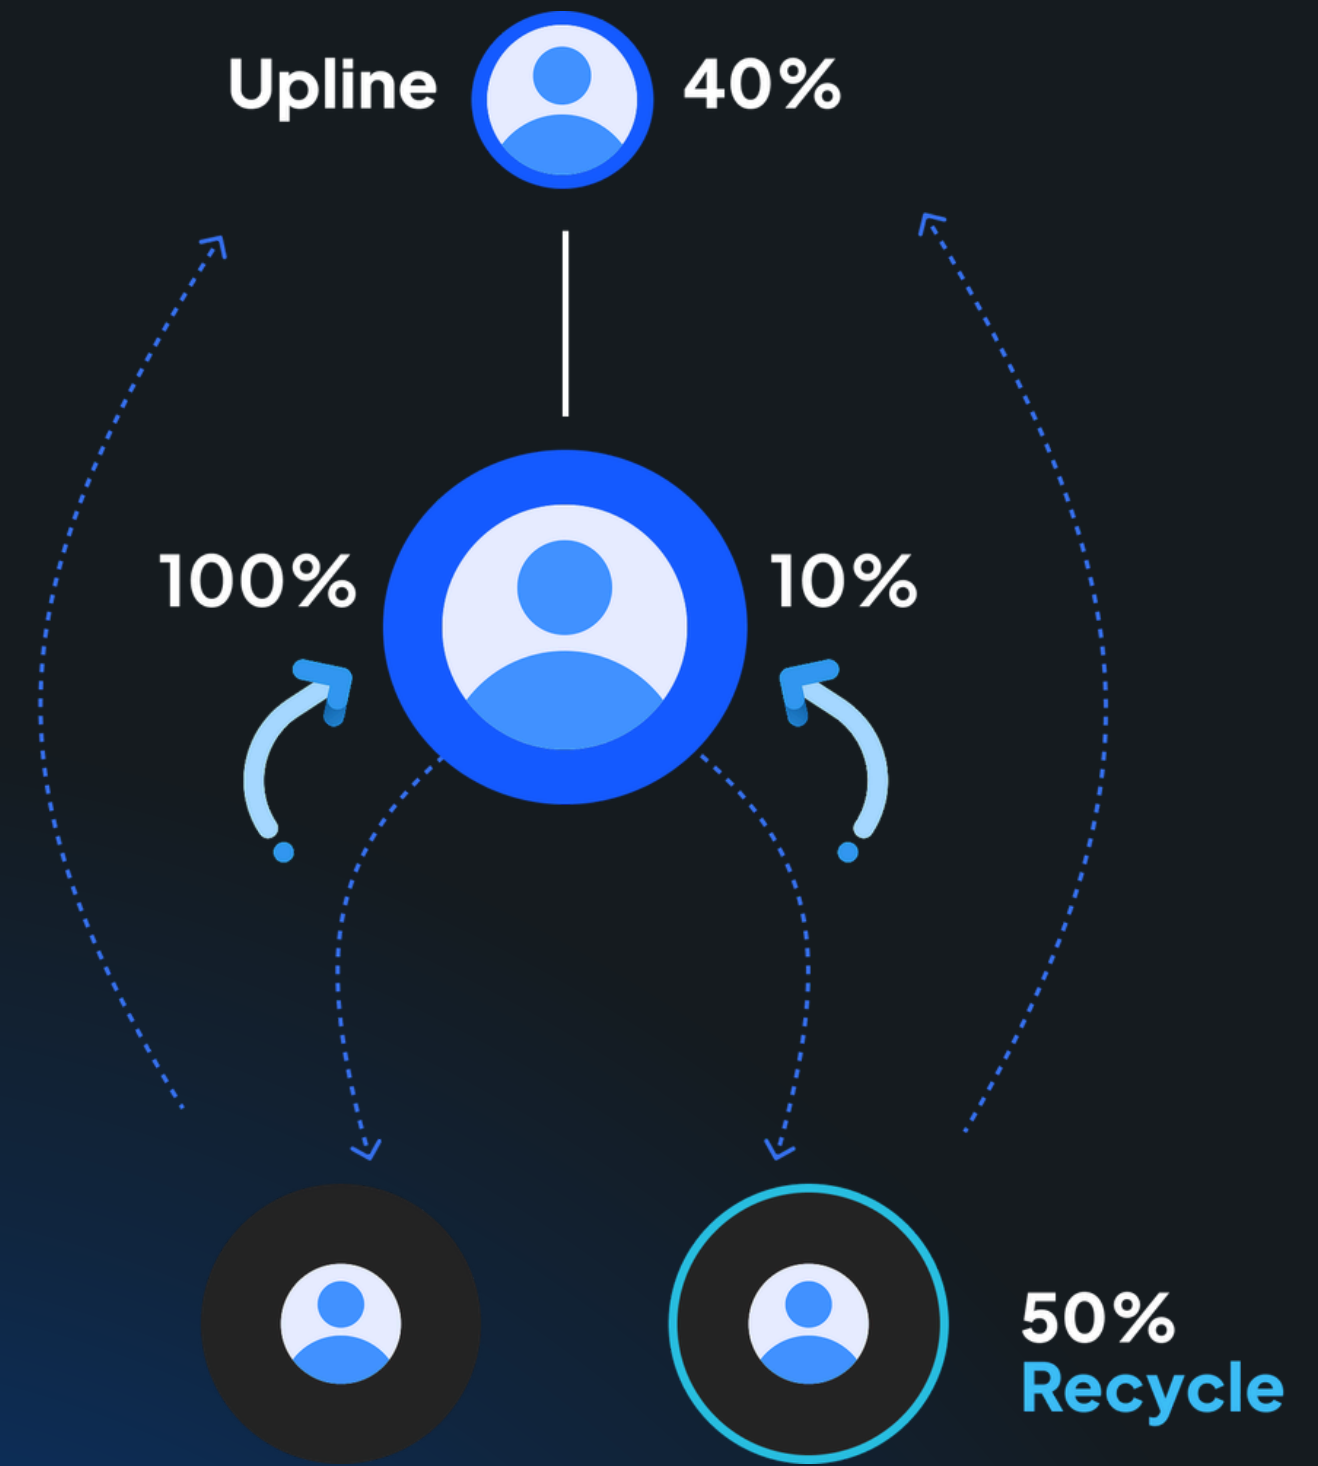

# Payout Structure and Income Distribution

Infinity follows a fully automated, on-chain payout mechanism that is triggered whenever a new participant fills a position within a matrix cycle. The distribution logic is embedded directly into immutable smart contracts, ensuring transparency, accuracy, and instant wallet-to-wallet payments without manual intervention. Each cycle consists of two positions, and payouts differ based on which position is filled.

# Payment Flow

When user activates a package by depositing SOL, the 1<sup>st</sup> position member will receive 100% of the purchase amount instantly.

When 2<sup>nd</sup> user is placed in user's matrix, Upline will receive 40% of the amount and 10% will be sent to the structure owner and 50% to user recycle.

This structured payout model ensures that direct recruiters are rewarded immediately while maintaining system sustainability through controlled distribution to uplines and cross lines

Position Filled	Recipient	Percentage	Amount	Notes / Conditions
Position 1	Referrer (Matrix Owner)	100%	100 SOL	Instant full payout
Position 2	Referrer (Matrix Owner)	10%	10 SOL	Always paid
Position 3	Eligible Upline	40%	40 SOL	Searches up to 25 levels for first active upline
Position 4	Cross line	50%	50 SOL	Rotates among predefined cross lines

# Unlimited Recycle Mechanism

The unlimited recycle mechanism is a core feature of the Infinity ecosystem. Once a matrix cycle is completed, a new cycle is automatically generated at the same level without any additional payment from the participant. This enables users to earn repeatedly from a single level activation.

New referrals are always placed into the oldest available open cycle, ensuring fairness and equal earning opportunity across all cycles. This mechanism allows long-term participants to benefit continuously from network growth, making Infinity a truly infinite earning system.

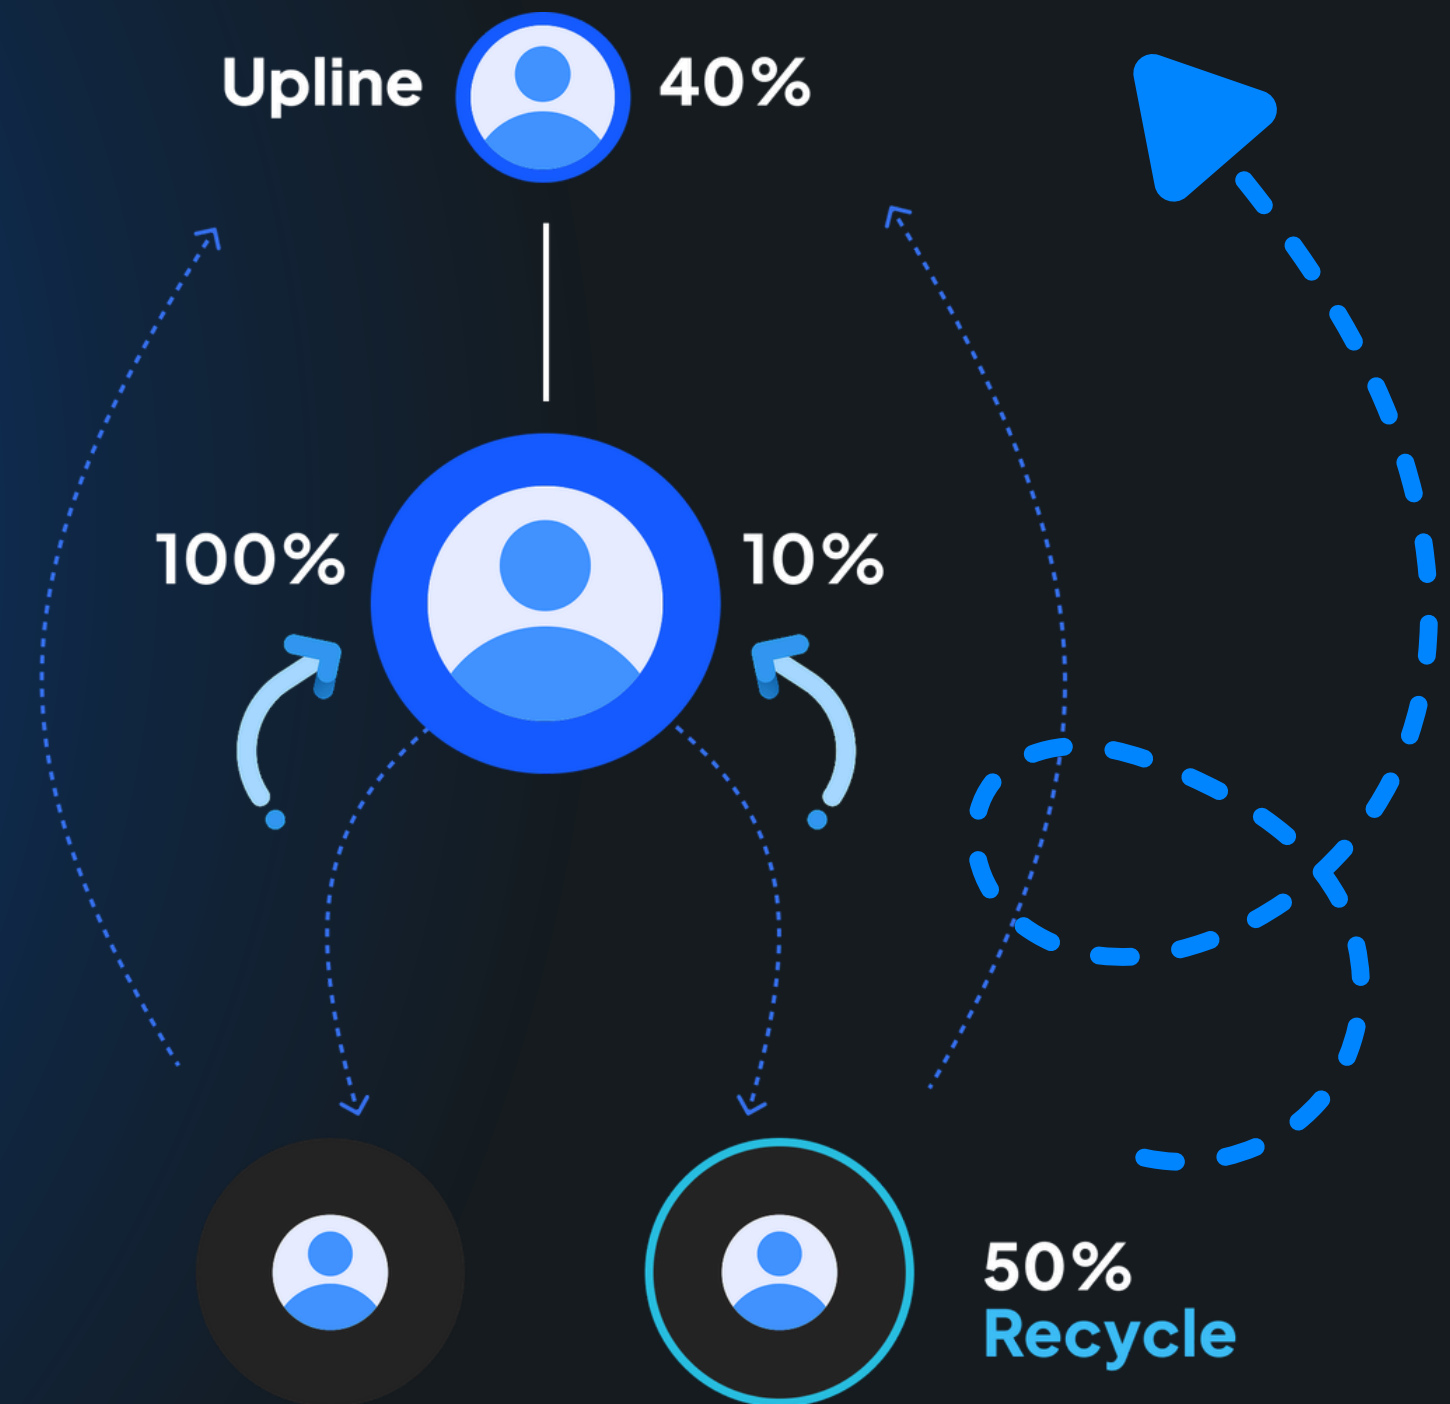

# Spillover Benefits

What is **spillover**?

Spillover in simple terms is replacement of eligible user in eligible user's matrix.

When user purchase the package but his original parent has not purchased that package yet, here the system place this user in eligible user's matrix who has purchased that package.

On 2<sup>nd</sup> position code will check the eligible upline till 25 levels up

# Security and Decentralization

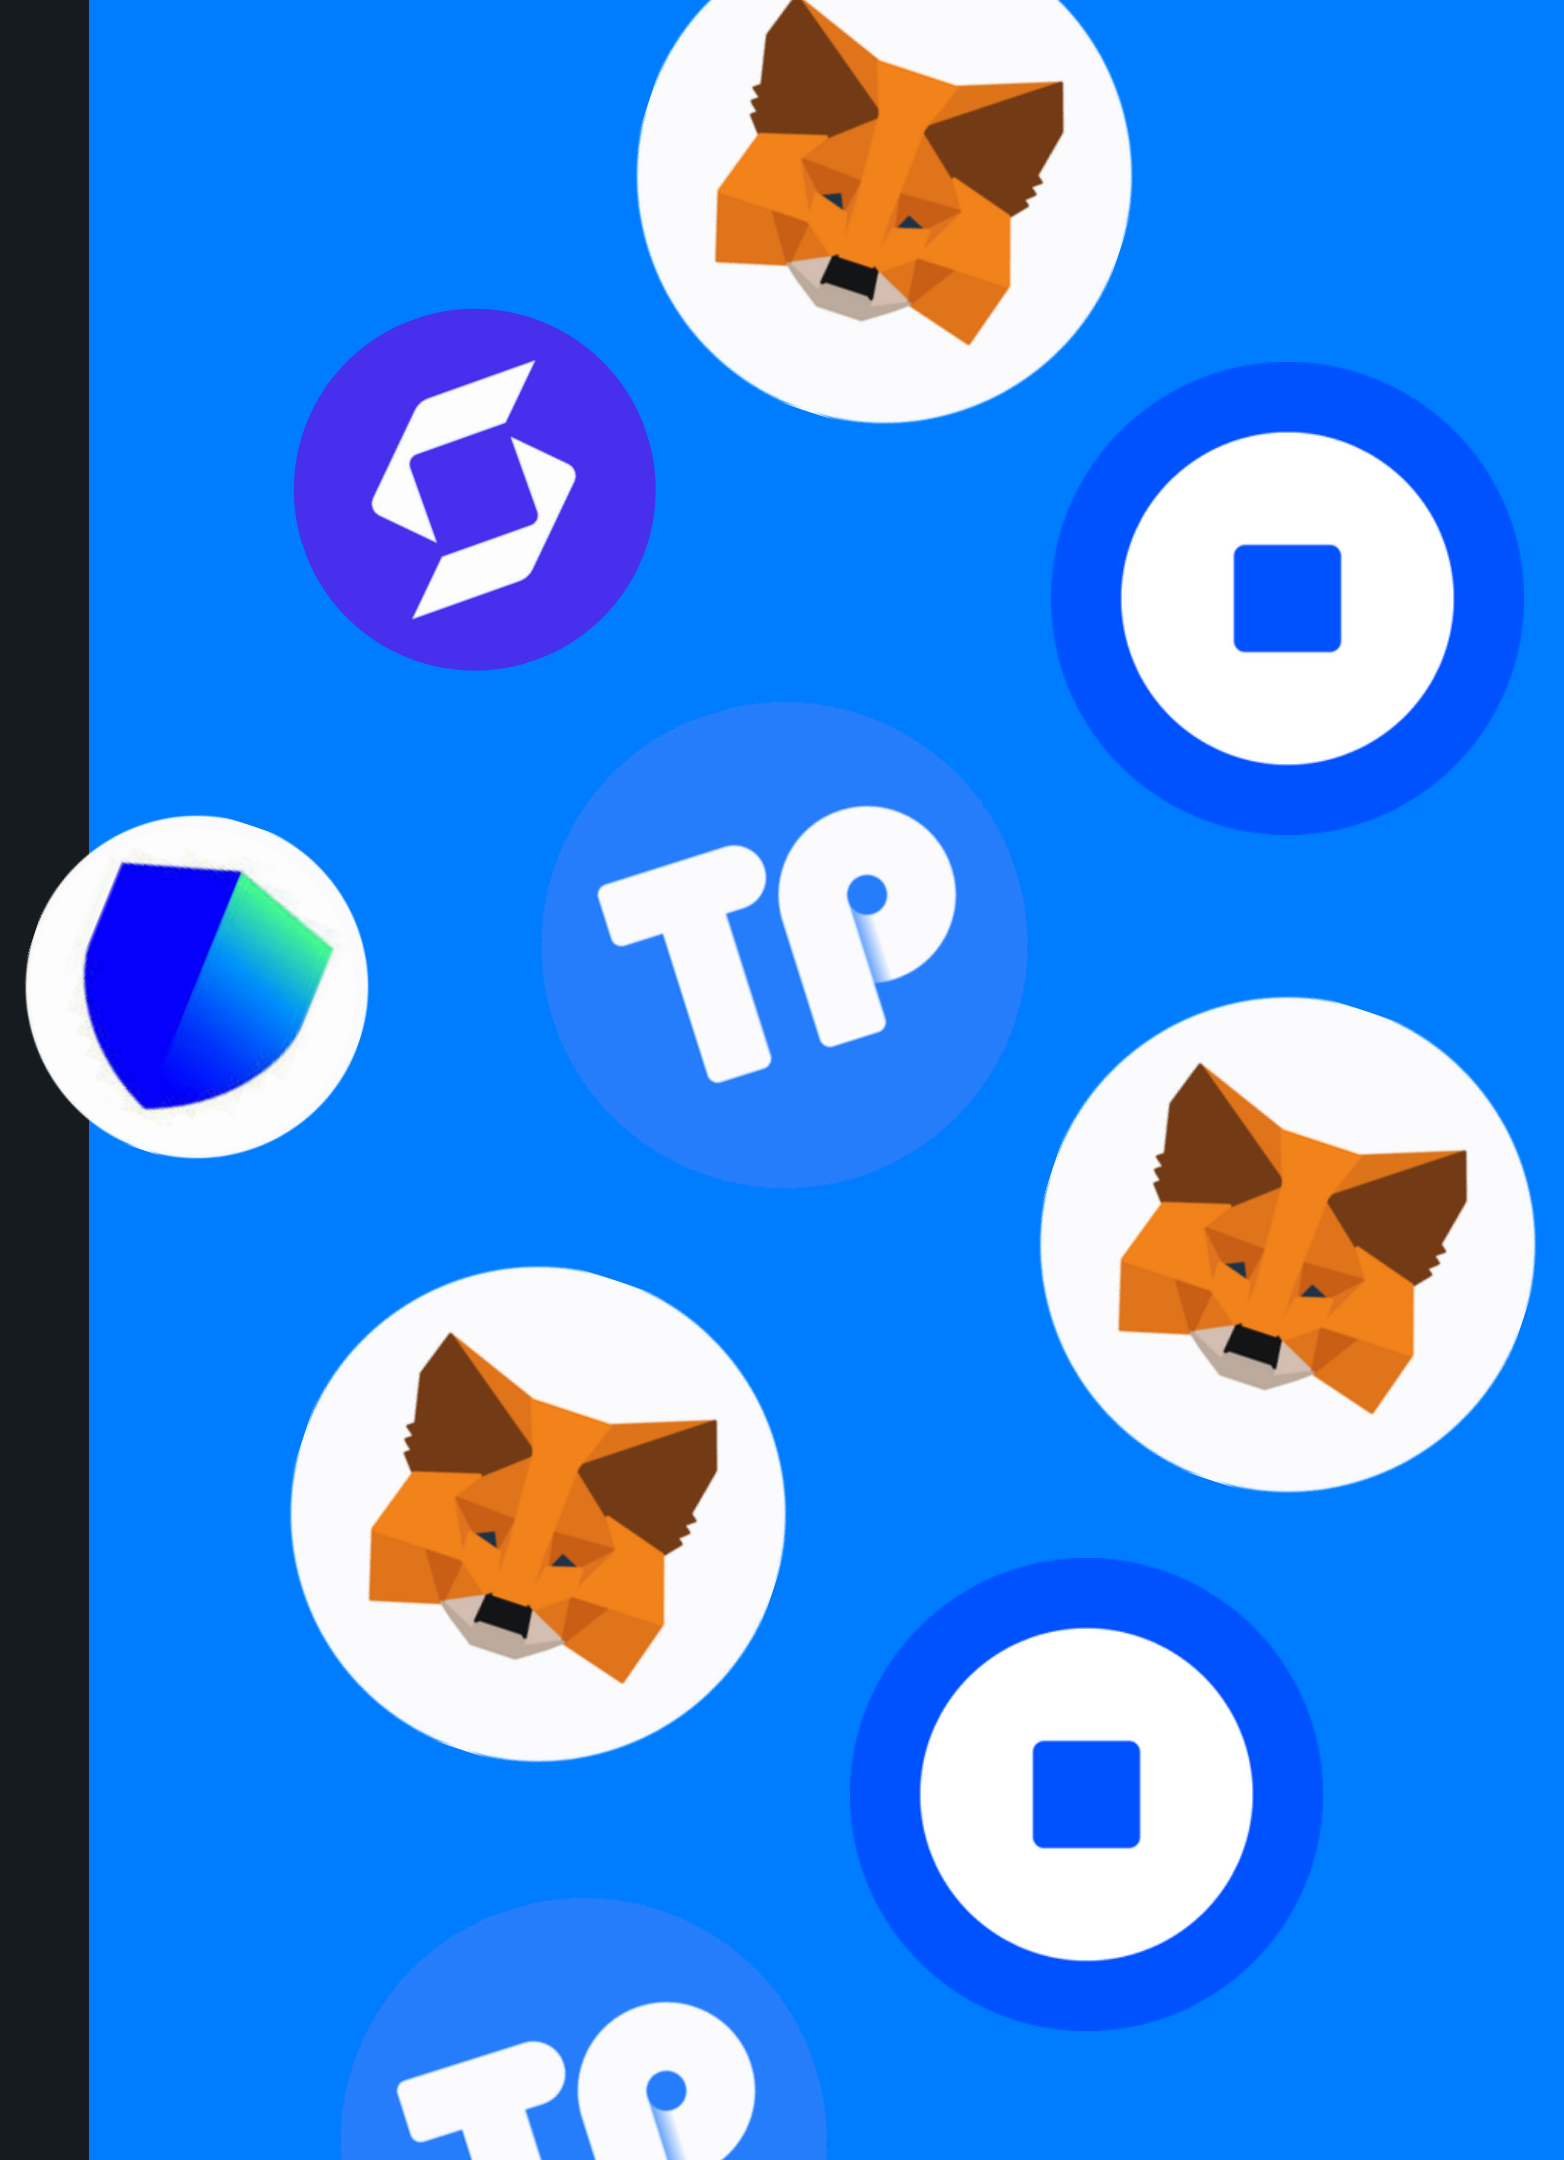

Infinity is built with security and decentralization as foundational principles. The platform operates without centralized fund custody, ensuring that no administrator or third party can access, freeze, or manipulate user funds. All smart contracts are immutable and executed exactly as deployed, with built-in protections such as reentrancy guards and strict execution conditions. Payouts occur directly from user to user, reinforcing transparency, ownership, and trust across the ecosystem.

# Wallet Compatibility

Infinity supports all major BEP-20 compatible wallets, including MetaMask, Trust Wallet, SafePal, and other BNB Smart Chain wallets. Users can connect their wallet seamlessly, approve token usage, and participate in the ecosystem without requiring specialized technical knowledge.

Wallet-based participation ensures that users retain full control over their assets at all times. There is no need to deposit funds into centralized accounts, significantly reducing counterparty risk and enhancing overall security.

# Conclusion

A decorative graphic in the top right corner of the slide. It features several green banknotes and gold coins falling from the top right towards the center. The background of the slide is dark blue with faint, concentric circular lines radiating from the bottom right corner.

Infinity represents a powerful evolution in decentralized earning systems by combining automation, transparency, and scalability within a single ecosystem. Built on Binance-Pegged Solana and the BNB Smart Chain, the platform delivers fast transactions, low fees, and secure wallet-to-wallet payouts.

With its structured matrix model, unlimited recycling, and decentralized architecture, Infinity empowers users to build sustainable income streams without centralized control.

Infinity is not merely a project—it is a long-term earning ecosystem designed for continuous participation, innovation, and global growth.
